1.ReadMe before operate

Due to network reasons, the normal configuration of JupyterLab takes about half a day, and there is a certain chance that the configuration will fail. For this reason, we have specially prepared images for you to configure the environment.

The mirror description is as follows:

Based on the official image updated on Raspberry Pi on August 20, 2020

1.Account: pi Password: yahboom

2. Installed Chinese input method and Chinese display
3. Turn on remote desktop VNC
4. Installed JupyterLab and set up auto-start at boot. The web access IP is http://:8888, and the login password is yahboom.
5. Configured Widgets plug-in for JupyterLab
6. Installed OpenCV4.5.0
7. Built-in OpenCV series tutorials (path: home/pi/Yahboom_Project)
8. Installed tensorflow-1.14.0
